

HOW TO BUILD A FEEDBACK LOOP

Feedback Loop, Courtesy of Brian of <http://www.guitartone.net/> and <http://www.indyguitarist.com/>

This is a FREE ebook, made courtesy of <http://www.guitartone.net/> (effect pedal diy kits)

You may give this away, or offer it on your website for FREE.

*The switch on the left turns the pedal on/off. The switch on the right converts it from feedback loop to true bypass box.

*For the pot, you can use any size. I generally use 100k.

* <http://www.guitartone.net> will have a DVD out by May 1, 2005 which will show you how to build this, as well as perform pedal mods.

See Next Page

"Sick and Tired of your 'thin' sounding guitar pedal?"
"Wish there was a cheaper way to get 'boutique'
TONES for 25% of the price?"

There IS...
